

## **A) Und die Erde dreht sich doch – nicht! (And the earth is not rotating)**

<http://auf-zur-mitte.blogspot.de/2015/12/und-die-erde-dreht-sich-doch-nicht.html>

Up to today, there was no direct, mechanical proof that earth is rotating! The Foucault pendulum which you can see in more and more museums is driven by vortex force, the “Coriolis force” which in Copernican heliocentrism is an imagined force. It is not revolving on the equator. So do all the other equipments (gyroscopes), because on the equator, the north and south vortexes cancel each other out.

On Christmas Eve 2015, I had a very simple idea: measure the revolution by using the fundamental law of conservation of angular momentum! On New Years Eve 2015/16 I put a duck in a water bucket and placed it in the lift of the Munich Olympic Tower. If earth was rotating and the height of the duck is changed, it should automatically change its angular velocity around the earth's rotation point (which is depending on latitude). But nothing happened. On the way down, also the little duck didn't want to start drifting according to the conservation law. We took a video with the mobile and you can see it on the page.

The other experiment is using the centrifugal force which is acting on any body in the same angle as its latitude. If you are at 48° north latitude, you are pushed off the ground in that angle, towards the equator. That acceleration vector can be divided in a vertical and a horizontal component. The vertical is nulled by gravity ( $9,8 \text{ m/s}^2$ ), but the remaining horizontal component has no counter vector! It's  $0,2 \text{ m/s}^2$  towards south. A weight of 35 kg is constantly pushed with a force of 100+ g. If you position it in such a sensible equilibrium, that already a 50 g pressure weight would make it tumble, it should immediately fall when released! But nothing happens neither!

These two fundamental experiments can be tried by anybody anywhere! They are true game changers! Because the people don't have to rely on the “experts” any more to repeat such a cosmologically fundamental experiment.

There can only be speculation why nobody cared for this simple experiments since Copernicus published his work in 1543. Was it arrogance? I believe it was ignorance of the true paradigm, of the cellular cosmology which is the only useful alternative to Copernican heliocentrism!

Another proof that the CH (Copernican Heliocentrism) is utterly wrong, is the gulf stream. Its waters carry an angular momentum which depends on the latitude. If the water is transferred to higher latitude without changing the momentum, then the radius is decreased and therefore the angular speed has to increase. I calculated that the water must reach 3000+ km/h eastward speed in the polar region! Same applies for any other object, travelling friction less from equator towards the pole, e.g. an airplane.

## **B) Zellularkosmologie (Cellular Cosmology)**

<http://auf-zur-mitte.blogspot.de/2015/12/zellularkosmologie>

If an old paradigm doesn't work any more, it's time to change. But if you don't know of an alternative, you will most happily accept all the errors and contradictions, because the least thing

man wants is to stop researching and exploring their environment, just because theory is imperfect. On the other side: If you know an alternative which is also scientifically explainable and already proven, then there is only one thing to be done: determine, which version is correct! There can be only one!

But that's harder than one thinks! To measure the curvature of earth's surface is pretty difficult, if you can't rely on optical laws, then you need to use mechanical methods. The optical phenomena remain pretty much unchanged in the cellular cosmology, because you can transform one view into the other, the outer into the inner view, by simply mirroring every point outside the sphere to the inside (by the  $1/r^2$  law).

On the blog page, you will find a video of the rectilineator experiment conducted in 1897 in Naples Beach (**A line has been drawn**). It already has amazing clicks.

You will also see, that the surface of the nucleus of the cell is what we see with our telescopes. The more we magnify it, the more it reminds us on the smallest structures of life – the human cell! It's ridiculous to postulate a homogenous and isotropic universe (the two Copernican principles) when you find such evidence of a "biological organism".

The CC complies with all the ancient myths and also with the tree of life. Its structure resembles the human eye! The traditional planets of the tree of life fit almost perfectly into the CC's structure!

If you discover that an old paradigm doesn't answer the most urgent questions of today's life, then it's time for a change.
